

SynTwin AI

AI Digital Twin Research Report

Experiment	SmartBasket Grocery User Research
Product / Service	SmartBasket – AI-Powered Grocery Shopping App
Research Domain	To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations.
AI Digital Twins	20
Survey Sessions	7

Generated by SynTwin AI

1. Executive Summary

This research report presents synthetic user research conducted for **SmartBasket – AI-Powered Grocery Shopping App** in the **To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations.** domain. SynTwin AI generated 20 AI Digital Twins based on the defined target audience and research objective.

Research Objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations.

2. Product & Research Setup

Product / Service	SmartBasket – AI-Powered Grocery Shopping App
Description	A mobile grocery shopping application that provides personalized product recommendations, budget tracking, and offers based on user preferences.
Target Audience	College students and young working professionals aged 18–30
Research Objective	To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations.
Research Domain	To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations.

3. Synthetic Persona Overview

Name	Age	Gender	Confidence
Arjun Kumar	24	Male	90%
Priya Sharma	27	Female	91%
Rahul Reddy	31	Male	92%
Sneha Patel	25	Female	93%
Kiran Rao	29	Male	94%
Ananya Singh	23	Female	95%
Vikram Kumar	34	Male	96%
Divya Reddy	30	Female	97%
Suresh Naidu	38	Male	98%
Meena Devi	35	Female	99%
Rohit Verma	28	Male	90%
Kavya Rao	26	Female	91%

Name	Age	Gender	Confidence
Nikhil Reddy	33	Male	92%
Pooja Sharma	29	Female	93%
Aditya Kumar	36	Male	94%
Arjun Kumar 16	24	Male	95%
Priya Sharma 17	27	Female	96%
Rahul Reddy 18	31	Male	97%
Sneha Patel 19	25	Female	98%
Kiran Rao 20	29	Male	99%

4. Persona Behavioural Details

1. Arjun Kumar

Background: Arjun Kumar is a 24-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

2. Priya Sharma

Background: Priya Sharma is a 27-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

3. Rahul Reddy

Background: Rahul Reddy is a 31-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

4. Sneha Patel

Background: Sneha Patel is a 25-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

5. Kiran Rao

Background: Kiran Rao is a 29-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping

habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

6. Ananya Singh

Background: Ananya Singh is a 23-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

7. Vikram Kumar

Background: Vikram Kumar is a 34-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

8. Divya Reddy

Background: Divya Reddy is a 30-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand

user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

9. Suresh Naidu

Background: Suresh Naidu is a 38-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

10. Meena Devi

Background: Meena Devi is a 35-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

11. Rohit Verma

Background: Rohit Verma is a 28-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced

by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

12. Kavya Rao

Background: Kavya Rao is a 26-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

13. Nikhil Reddy

Background: Nikhil Reddy is a 33-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

14. Pooja Sharma

Background: Pooja Sharma is a 29-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

15. Aditya Kumar

Background: Aditya Kumar is a 36-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

16. Arjun Kumar 16

Background: Arjun Kumar 16 is a 24-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

17. Priya Sharma 17

Background: Priya Sharma 17 is a 27-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

18. Rahul Reddy 18

Background: Rahul Reddy 18 is a 31-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

19. Sneha Patel 19

Background: Sneha Patel 19 is a 25-year-old female belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping

habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

20. Kiran Rao 20

Background: Kiran Rao 20 is a 29-year-old male belonging to the target audience for SmartBasket – AI-Powered Grocery Shopping App. Their experiences are relevant to the To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations. domain and their needs are influenced by the research objective.

Goals: Wants to use SmartBasket – AI-Powered Grocery Shopping App to solve relevant problems efficiently, save time and achieve practical outcomes. Their main goal is aligned with the research objective: To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Behaviors: Usually evaluates different options before making decisions. Considers usability, reliability, convenience, cost and practical value when using solutions related to To understand user preferences, shopping habits, price sensitivity, and willingness to use AI-based grocery recommendations..

Preferences: Prefers simple interfaces, clear information, reliable performance, useful features, convenience and transparent pricing.

Pain Points: May become frustrated by complicated processes, unclear information, high costs, poor usability, unreliable features or solutions that do not match their needs.

5. Survey Results

Survey Questions

What factors are most important when choosing a grocery product?

Persona Responses

Arjun Kumar

1. Price and value for money are the most important factors for me. I usually compare prices, offers, and pack sizes before buying.
2. Product quality and freshness matter a lot, especially for fruits, vegetables, dairy, and bread. I don't want to save money if the product is poor quality.
3. Brand trust is important, but I'm open to trying cheaper alternatives if the reviews and ingredients look reliable.
4. I prefer clear product information, including ingredients, expiry date, nutrition details, and country of origin when available.
5. Convenience is also a factor. If the app helps me quickly find the best option and avoid wasting time comparing products, I would use it.
6. Reviews and ratings influence my decision, especially for new products or brands I haven't tried before.
7. I would trust AI recommendations more if SmartBasket clearly explains why it is suggesting a product, such as lower price, better rating, healthier option, or frequent purchase match.
8. Overall, my priority is getting a good balance of low price, good quality, and reliable information without making the shopping process complicated.

Priya Sharma

1. ****Price**** – I'm pretty budget-conscious, so I always compare unit prices and look for discounts or loyalty deals.
2. ****Freshness and quality**** – Especially for produce, dairy, and meat, I won't compromise on freshness even if it costs a bit more.
3. ****Nutritional value**** – I check labels for sugar, protein, and ingredients because I try to eat balanced and healthy.
4. ****Brand reliability**** – I tend to stick with brands I trust, but I'm open to store brands if reviews are good.
5. ****Convenience**** – Pre-cut veggies, ready-to-cook meals, or items that save time are worth extra to me on busy weeks.
6. ****Expiration date**** – I always look for the longest shelf life so I don't waste food or money.

Rahul Reddy

1. Price and value for money — I compare unit prices across brands and sizes to make sure I'm getting a fair deal, especially on staples I buy regularly.
2. Freshness and quality — For produce, meat, and dairy, I check expiration dates, look for signs of spoilage, and prefer items that'll last several days in the fridge.
3. Convenience and availability — If I can't find it quickly in the store or it's frequently out of stock, I'll switch to a reliable alternative. I don't have time to hunt across multiple aisles or stores.
4. Nutritional content and ingredients — I scan labels for added sugars, sodium, and ingredient lists I can actually understand. Cleaner labels win.
5. Brand reliability — Certain brands I've trusted for years (like for pantry staples or snacks) because they're consistent. New brands need a strong reason to switch me.
6. Clear, honest labeling — No misleading "healthy" claims on junk food. Transparent packaging info saves me time and frustration.

Sneha Patel

1. Price and overall value for money, because I am very conscious of my budget and prefer transparent pricing so I know exactly what I am paying without any hidden costs.
2. Freshness and quality of the items, since I need reliable groceries that actually meet my expectations and don't spoil quickly.
3. Convenience and how much time it saves me, as I prefer simple and straightforward processes rather than complicated ones that waste my effort.
4. Clear and detailed product information, because I get frustrated when details are unclear or hard to find, and I need to know exactly what I am buying.
5. Availability and reliability of the brands, because I want to trust that the items I choose will actually be in stock and perform well without any unreliable issues.

Kiran Rao

1. Price and value for money — I always check the cost per unit and whether there are discounts or loyalty deals, because staying within budget matters.
2. Freshness and quality — Especially for produce and dairy; I look at expiry dates and storage requirements to avoid waste.
3. Convenience and availability — If an item is out of stock or requires a special trip, I'll skip it or find a substitute.
4. Nutritional content and health labels — I compare ingredients, sugar/sodium levels, and dietary fit (like gluten-free or protein content).
5. Brand reliability and reviews — I trust established brands or check user ratings to avoid trying risky new products without feedback.
6. Delivery speed and packaging — For online orders, I care about intact packaging and quick delivery windows.
7. Simple comparison tools — I want to see side-by-side specs and prices without jumping between tabs or apps.

Ananya Singh

1. Price and value for money are very important—I compare prices and look for discounts or offers.
2. Product quality matters a lot, especially freshness for fruits, vegetables, dairy, and bread.
3. I check ingredients and nutrition labels, especially for snacks, ready-to-eat items, and health products.
4. Brand trust is important because I prefer products that are reliable and consistent in quality.
5. Convenience matters—I like products that are easy to find, clearly described, and simple to reorder.
6. Reviews and ratings help me decide, especially when I'm trying a new product.
7. I prefer clear information about expiry date, origin, size/weight, and any hidden charges.
8. Deals, loyalty rewards, and subscription discounts can influence my choice if the product quality is good.
9. Packaging and sustainability are nice to have, but I won't choose them if they are too expensive.
10. Overall, I want a product that is affordable, fresh, trustworthy, and easy to purchase without confusion.

Vikram Kumar

User Safety: safe

Divya Reddy

1. Price and overall value for money, because I am always conscious of my budget and strongly prefer transparent pricing without any hidden fees.
2. Convenience and time-saving, since as a busy professional, I want to quickly find and purchase what I need without dealing with complicated processes.
3. Product quality and reliability, as I prefer options that consistently deliver good results and actually match my household needs.
4. Clear and accurate product information, because I get frustrated when details are unclear or misleading and I need to make informed decisions.
5. Ease of use and simple interfaces, because I appreciate straightforward navigation that makes the entire shopping experience smooth and hassle-free.

Suresh Naidu

1. Price and value for money
2. Product quality and freshness
3. Nutritional information and health benefits
4. Brand reliability and trust
5. Convenience (ease of use, packaging, preparation time)
6. Availability of promotions or discounts
7. Relevance to personalized AI recommendations (fit with dietary preferences and past purchases)

Meena Devi

1. Price and value for money are my top priority — I compare prices across brands and stores to get the best deal without compromising too much on quality. Freshness and quality come next, especially for produce, dairy, and meat — I check expiry dates and look for signs of freshness. Brand trust matters for packaged goods; I stick to brands I know are reliable. Clear labeling with ingredients, nutritional info, and manufacturing dates helps me decide quickly. Convenience plays a role too — if a product is consistently available at my usual store or easy to find on the app, I'm more likely to buy it again. Health considerations like low sugar, no artificial additives, or organic options influence me when I can afford them.

Rohit Verma

1. When choosing a grocery product, the most important factors for me are price and quality. I always compare prices across brands and check reviews or ingredients to ensure I'm getting good value.
2. I usually do my grocery shopping once a week, mostly on weekends. I prefer evening hours because the stores are less crowded and I can take my time picking items.
3. I'm somewhat price-sensitive. I have a budget in mind and try to stick to it, but I won't compromise on essential items like fresh produce or dairy. For non-essentials, I look for discounts or generic brands.
4. Yes, I would definitely be interested in using AI-based grocery recommendations. If an app can suggest healthier alternatives, remind me of items I'm running low on, or help me save money, that would be very useful.
5. I primarily shop in physical stores, but I've started using online delivery services when I'm busy. I'd say about 70% in-store and 30% online.
6. A feature that creates a shopping list based on my past purchases and dietary preferences would be extremely helpful. Also, real-time price comparisons between stores would save me a lot of time.
7. I'd be willing to pay a small monthly fee, maybe up to \$5, if the app genuinely saves me time and money. Anything more than that would need to offer significant added value.
8. Privacy is important to me. I'd want to know exactly what data the app collects and how it's used. Transparency here is key to building trust.
9. I use my smartphone for most of my daily tasks, so an app that integrates well with my calendar and shopping habits would be ideal. Voice search and barcode scanning would also be nice features.
10. If the app frequently crashes, gives irrelevant suggestions, or takes too long to load, I'd stop using it quickly. Reliability and accuracy are non-negotiable for me.

Kavya Rao

1. Price – I look for the best value for my money and try to stay within my budget.
2. Freshness and quality – The product should be fresh, high quality, and safe to consume.
3. Convenience – Easy-to-use packaging, ready-to-cook options, or items that fit my busy schedule are a priority.
4. Brand reputation and trust – I prefer brands I know are reliable and have good customer feedback.
5. Nutritional value and ingredients – I consider health aspects, such as low additives, organic options, or specific dietary needs.

Nikhil Reddy

1. Price and value for money: I always look for products that offer good quality at a reasonable price. I compare prices to ensure I'm getting the best deal without compromising on essential quality.
2. Convenience and ease of access: I prefer products that are easy to find in the store or order quickly through apps like SmartBasket. Time-saving options like pre-cut vegetables or ready-to-eat meals are a big plus.
3. Reliability and consistency: I rely on brands or products that I trust to deliver consistent quality every time. This reduces the risk of disappointment and saves me from having to re-evaluate choices frequently.
4. Health and nutritional value: As someone who balances a busy lifestyle, I prioritize products that are nutritious and align with my dietary goals, such as low-sugar options or organic choices when feasible.
5. Brand reputation and reviews: I often check customer feedback or brand reputation before purchasing, especially for new items. This helps me gauge reliability and avoid potential pitfalls.
6. Freshness and expiration dates: For perishable goods, I always check freshness and expiration to ensure the product lasts and is safe to consume.
7. Practicality and usability: I consider how easy the product is to use in my daily cooking routines. For example, packaging that is resealable or ingredients that simplify meal prep are important.

Pooja Sharma

1. When choosing a grocery product, the most important factors for me are **price and value for money**, followed closely by **quality and freshness**. I also heavily consider **convenience**—like how easy it is to prepare or how quickly I can get it—and **health/nutritional value**. Brand reputation and clear ingredient labeling are also key, as I want to trust that what I'm buying is reliable and safe for my family.

Aditya Kumar

1. Price and transparent pricing are my top priority. As someone who is highly price-sensitive, I get frustrated by high costs or hidden fees, so I always look for clear value for money before making a decision.
2. Convenience and time-saving are extremely important to me. My main goal when shopping is to solve problems efficiently, so I prefer simple processes that save me time rather than dealing with complicated ones.
3. Clear and accurate product information matters a lot. I prefer straightforward interfaces and get frustrated by unclear details or confusing layouts that make it hard to evaluate my options.
4. Reliability and practical value are key factors for me. I need to know that the product or recommendation will actually work and deliver the practical outcomes I need without any unreliable features.

Arjun Kumar 16

1. Price and overall value – I always compare costs per unit and check for deals because my budget is tight, so I need to make sure I'm getting the best bang for my buck.
2. Freshness and expiry dates – I check manufacturing and expiry dates carefully; nothing ruins a grocery trip faster than buying something that goes bad in two days.
3. Nutritional labels and ingredients – I'm trying to eat healthier, so I look at protein, sugar, and sodium levels, plus avoid items with too many additives.
4. Brand trust and reviews – I stick to brands I've used before, but I also read ratings and user comments on apps like SmartBasket to see if others had quality issues.
5. Availability and delivery options – If I can't get it locally or the delivery slot is inconvenient, I'll swap it for something easier to find.
6. Quantity and packaging size – I buy based on how much I actually consume; too big means waste, too small means paying extra per unit.
7. Discounts and loyalty rewards – Cashback, coupons, or loyalty points definitely sway my choice if the product is otherwise similar to a cheaper competitor.

Priya Sharma 17

1. When choosing a grocery product, the most important factors for me are:
 - **Price** – I'm quite price-sensitive and always looking for the best value for my money.
 - **Brand reputation** – I tend to stick with brands I trust, especially for items I use regularly.
 - **Nutritional value** – For food items, I pay close attention to ingredients and nutritional content.
 - **Convenience** – How easy it is to prepare or use the product matters a lot in my daily routine.
 - **Promotions or discounts** – I'm more likely to try something new if there's a good deal or discount available.

Rahul Reddy 18

1. The most important factors for me are price and value for money. I usually compare prices and look for offers before choosing a product.
2. Quality and freshness matter a lot, especially for vegetables, fruits, dairy, and meat products.
3. I prefer clear product information, including ingredients, expiry date, nutritional details, and country/brand details.
4. I trust brands or products that are reliable and consistently good, even if they are slightly more expensive.
5. Convenience is important, such as easy availability, quick delivery, and simple replacement options if a product is out of stock.
6. Discounts, loyalty benefits, and transparent final pricing influence my decision a lot.
7. I also consider recommendations or reviews from other customers, especially when trying a new product.

Sneha Patel 19

1. ****Freshness and quality**** — especially for fruits, vegetables, dairy, and meat.
2. ****Price and discounts**** — I compare prices and prefer good value, deals, or budget options.
3. ****Brand trust**** — I usually choose familiar brands I've used before and trust.
4. ****Ingredients and nutrition**** — I check ingredients, expiry dates, sugar, additives, and health value.
5. ****Availability**** — If a product is unavailable, I quickly look for a similar alternative.
6. ****Convenience**** — Easy-to-use packaging, ready-to-cook options, and products that save time are appealing.
7. ****Reviews and recommendations**** — I consider customer reviews and AI suggestions if they seem practical and reliable.

Kiran Rao 20

1. Price and transparent pricing - I'm very budget-conscious and always look for the best value, so hidden fees or unclear costs are an immediate turn-off for me.
2. Product quality and freshness - I need to trust that what I'm buying is reliable and actually good, otherwise it's a waste of time and money.
3. Convenience and time saved - As someone with a busy lifestyle, being able to quickly find what I need without a complicated process is crucial.
4. Clear and detailed product information - I get frustrated when details are vague; I want straightforward info to make fast decisions.
5. Ease of use - I prefer simple interfaces and a smooth shopping experience; if the process is clunky, I'll just abandon it.

6. Representative Persona Quotes

Arjun Kumar: "1. Price and value for money are the most important factors for me. I usually compare prices, offers, and pack sizes before buying."

Priya Sharma: "1. **Price** – I'm pretty budget-conscious, so I always compare unit prices and look for discounts or loyalty deals."

7. Conclusion

SynTwin AI created 20 synthetic digital twins for the research experiment **SmartBasket Grocery User Research**. The personas were generated using the product, research domain, target audience and research objective to support consistent synthetic user research.

This report is generated using synthetic AI personas and should be interpreted as simulated research rather than direct evidence from real users.
